

Writing Samples:

1. <https://docs.nginx.com/nginx-controller/admin-guides/config-agent/about-controller-agent/>

The content of the document was partially updated, with less than half of the original information being altered. Additionally, a script was implemented to present the updated content in a structured table format.

- The revision was undertaken to incorporate the most recent information into the document.
- The updated data was supplied by the product manager.
- A peer review was conducted by another technical writer to ensure accuracy and completeness.
- Once submitted for review, the document was not subjected to further edits.
- The entire update process was completed within a single day.
- Although no specific style guides were consulted, research was done on techniques for converting existing text into a table format using coding or scripting.
- This update is a segment of the Controller documentation and was composed incrementally, rather than being included in the initial product release.

2. <https://docs.nginx.com/nginx-controller/api-management/manage-apis/>

The entire content of this page is my own creation and reflects my individual writing efforts. The development of this document involved:

- Participation in Sprint demonstrations to gather necessary details.
- Hands-on engagement with the latest version of the product to ensure accuracy and relevance in the outlined procedures.

Following its completion, the document underwent a peer-review process as per standard documentation practices, conducted by a fellow Technical Writer. This review resulted in minimal edits to the original text.

In adherence to organizational standards, a company-specific style guide for procedural documents was utilized throughout the drafting process.

The completion of this document spanned the duration of one sprint cycle, equivalent to two weeks.

The primary purpose of this document is to assist APIM Customers by providing them with relevant and practical information.

3. <https://docs.nginx.com/nginx-controller/services/available-policies/>

I authored this page entirely, ensuring that it showcases my unique writing style. The content was developed through direct interactions with the Product Manager and the Scrum Master. As part of our standard documentation protocol, the draft underwent a peer review by another Technical Writer, resulting in minor edits for refinement.

- The drafting process was guided by the company's prescribed style guide specifically tailored for conceptual documents, which I adhered to meticulously.
- The document was completed within the timeframe of one sprint, which equates to two weeks.
- The creation of this document was motivated by the aim to support APIM Customers, providing them with valuable insights and guidance.

4. <https://docs.nginx.com/nginx-controller/admin-guides/install/install-nginx-controller-agent/>

The entirety of this page is a result of my own writing efforts. The information presented here is a compilation of my own original work, drawn from various sources, including:

- Interactive discussions with the product manager,
- A demonstration provided by the development team.

In adherence to our documentation quality standards, another Technical Writer conducted a peer review of this document, which resulted in minor revisions.

This document is primarily textual, featuring a small number of terminal commands which I mastered through discussions with the product manager and practical use of the software.

A company style guide specific to Installation guides and procedural documents was followed to ensure consistency and clarity.

The completion of this document spanned over two sprint cycles, amounting to four weeks, as my attention was divided among multiple tasks.

This document was specifically crafted to facilitate customers' use of the NGINX Controller via the Agent. It builds upon pre-existing Controller documentation, which provided a foundation for my testing and practical application in crafting this guide.
